

Summaries of Audit Reports 2005/2006

Board of Audit of Japan

2005

Project for carbon dioxide emissions control

The objectives of subsidies for a carbon dioxide emissions control project were not achieved. Because the generated output by the small wind-power generator installed was less than electricity consumed, carbon-dioxide emissions were not reduced.

(1 case; 185.00 million yen)

2006

No.1 Project for forest environment preservation

In submitting requests for the State contributions for a forest environment preservation project, forestry cooperatives falsely applied predetermined multipliers to relevant expenses and added the multiplied amounts based on claims that they were undertaking the project, although the actual undertakers were forest owners who undertook the project either by themselves or by employing other forestry subcontractors. As a result, the subsidies were overpaid.

(3 cases; 87.18 million yen)

No.2 Project to maintain water and soil preservation forestry

The objectives of a project to maintain water and soil preservation forestry were not achieved in a installation work of earth retaining structures in a gulch, because impacts of the gulch stream on the earth retaining structures had not been considered sufficiently when designing the structures. Due to this improper designing, stability of the earth retaining structures might be damaged.

(1 case; 2.02 million yen)

No.3 Project to upgrade waste disposal facilities

The objectivities of subsidies for a project to upgrade waste disposal facilities were not achieved, because an ash melting facility which had been upgraded under the project was left out of order due to improper maintenance and inappropriate administration.

(1 case; 3.20 million yen)
